MCL Cable Seals
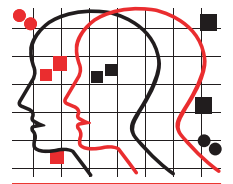

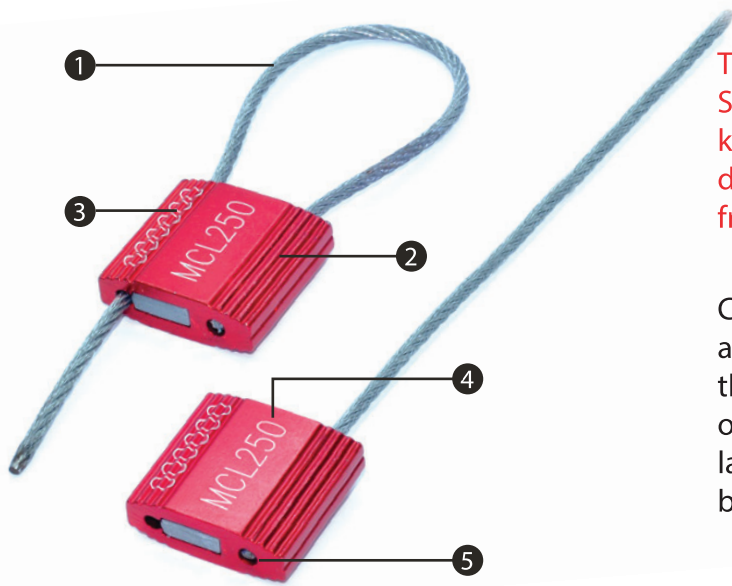

The high security MCL Cable Seal range require no locking keys and are a cost effective barrier designed to easily prevent tampering from would-be or strategic offenders.

Cable thickness should be chosen for your specific application between 1.5mm – 2.5mm – 3mm and 5mm thick and the Alloy Locking Body is also available in a range of colours. All cable seals are uniquely numbered by way of laser etching and with higher volumes, seals are available branded with particular company information.

FEATURES

1. The MCL Cable Seal is a high quality low-cost cable seal.
2. The exterior has been designed with a rib pattern, which protects the marking during rough handling.
3. The Cable Breakaway Seals are etched with permanent laser marking. Laser marking offers the highest level of security as it cannot be removed and replaced.
4. The Cable seals are all anodised in solid colours, which accommodate customised laser marking. Anodising also makes colour coding possible and eases identification from a distance.
5. One end of the cable is permanently secured into the locking body.

SPECIFICATIONS

	MCL150	MCL250	MCL350	MCL500
Material	Aluminium body with galvanised steel wire rope
